DETAILED ACTION

Election/Restrictions

1. Applicant's election with traverse of Species I (Figs. 1-5), claims 1-6 and 12-16 in Paper No. 4 is acknowledged. The traversal is on the ground(s) that the applicant believes that all of the claims in the present application can be examined at the same time without serious burden. The applicant contends that the search required for the non-elected species is coextensive with the search required for the elected species. Furthermore, the applicant also asserts that examining all of the claims of this application at the same time would only involve consideration of a few additional claims. This is not found persuasive because the Examiner asserts the second species (Figs. 6-11) is directed to a second embodiment of the present invention; wherein the second embodiment is not an obvious variant of the first embodiment; wherein the second embodiment is characterized by substantial structural differences. The requirement is still deemed proper and is therefore made FINAL.
2. Therefore, claims 7-11, 17, and 18 are withdrawn from further consideration pursuant to 37 CFR 1.142(b), as being drawn to a nonelected embodiment. Furthermore, the applicant is reminded that upon the allowance of a generic claim, applicant will be entitled to consideration of claims to additional species which are written in dependent form or otherwise include all the limitations of an allowed generic claim as provided by 37 CFR 1.141. If claims are added after the election, applicant must indicate which are readable upon the elected species. MPEP § 809.02(a).

Priority

3. Acknowledgment is made of applicant's claim for foreign priority under 35 U.S.C. 119(a)-(d). The certified copy has been filed in parent Application No. 10/042,309, filed on 01/11/02.

Claim Rejections - 35 USC § 102

4. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

5. Claims 1-6 and 12-16 are rejected under 35 U.S.C. 102(b) as being anticipated by Kritzler et al. (U.S. Patent No. 5,685,581). Kritzler discloses a vehicle door handle device as claimed; wherein said device comprises a frame (1) equipped on a door panel (3) of a vehicle door; a handgrip (2) having a first end portion rotatably mounted on the frame and a second end portion forming an operation portion linked with a door lock (15) mechanism, the handgrip being rotatable within a predetermined angle to operate the door lock mechanism and effect opening of the vehicle door when the operation portion of the handgrip is moved to rotate the handgrip relative to the frame; a projection formed on one of the frame and the first end portion of the handgrip; and a groove formed on the other of the frame and the first end portion of the handgrip (see Fig. 6), the projection being positioned in the groove to move within the groove when the operation portion of the handgrip is moved to rotate the handgrip relative to the frame, the projection being engageable with a periphery of the groove to inhibit dislocation of the handgrip

from the frame, see col. 3, lines 20-40. In regards to claims 2 and 13, Kritzler's device comprises a frame that includes a first base member and a separate second base member, the first and second base members being spaced apart from one another, see Fig. 1. Regarding claims 3 and 4, Kritzler's projection is provided on the first base member and the groove is provided on the first end portion of the handgrip. As it concerns claim 5, Kritzler's groove includes an inclined surface portion and a fitting portion, the projection being positioned in the fitting portion, and the fitting portion having oppositely located peripheral portions defining limits of the predetermined angle of rotation of the handgrip. Regarding claims 6, 14 and 16, Kritzler's frame includes an integrally formed shaft portion (5) on the first base member and the first end portion of the handgrip includes an open-ended slot (7) receiving the shaft portion, the handgrip rotating about the shaft portion when the operation portion of the handgrip is moved away from the frame to rotate the handgrip relative to the frame.

Conclusion

6. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Kritzler (U.S. Patent No. 5,791,703), Mizuki (U.S. Patent No. 5,860,684), Josserand *et al.* (U.S. Patent No. 6,401,302), Laurie (U.S. Patent No. 4,883,296), Benard *et al.* (U.S. Patent No. 6,239,693), Linder *et al.* (U.S. Patent No. 6,007,122), Johnson (U.S. Patent No. 4,482,179), Josserand (U.S. Patent No. 6,523,871), Muneta (U.S. Patent No. 6,543,090), Meinke (U.S. Patent No. 6,447,030), Fukumoto *et al.* (U.S. Patent No. 6,415,636), Spitzley (U.S. Patent No. 6,363,577), Mittelbach *et al.* (U.S. Patent No. 6,234,548), and Kritzler (U.S. Patent No. 5,725,262) substantially disclose the present invention as claimed.
